

STYLE GUIDE 2019

LOGO

PRIMARY LOGO

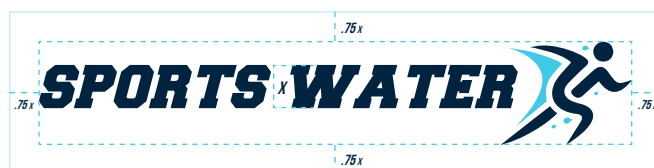

Use only the vector source files provided when placing the logo. The logo can be resized with constrained proportions, preserving size and spacial relationships within the graphic.

CLEAR SPACE

A unit measurement based on the height of "Water" from the wordmark is labeled 'X'. This fixed measurement (0.75X) is then positioned around the logotype to create the minimum clear space needed when designing layouts to prevent any text or images from encroaching upon this area.

HORIZONTAL LOCKUP

For use on brand communication or when the stacked lockup cannot be used.

ICON

RUNNING MAN ICON

The Running Man is a symbol that exemplifies Sports Water and associates the brand to it's products and partners. It's not a full expression of the Sports Water brand, so the role of the Running Man is secondary to our Primary Logo lockup.

The Running Man proudly endorses Sports Water products and non-corporate publications, as well as any brand elements that work in isolation to the Brand.

COLOR VARIATIONS

The preferred logo is the version with the running man in Sports Navy with the swoosh and sweat in Aqua Teal. However, legibility is the most important component in the use of color; It will always seek contrast between the lockup and the background.
